

Swagger AI - Overview

The screenshot shows the Swagger AI Overview dashboard. The left sidebar contains navigation links: Overview (selected), Specifications, Environments, Test execution, Reports, Test generation, and Settings. The main content area displays the workspace name 'Northstar QA' and the date 'MONDAY, SEPTEMBER 14, 2026'. A greeting 'Good morning, Alex.' is followed by the text 'Here is the quality pulse for your API workspace.' and a 'Start a test run' button. Below this are four summary cards: 'Active specifications' (12, 2 added this month), 'Tests this week' (248, ↑ 18% from last week), 'Pass rate' (94.8%, ↑ 2.4% from last week), and 'Environments' (4, All connections healthy). A 'RECENT ACTIVITY' section titled 'What needs your attention' lists three items: 'Petstore API test run completed' (Passed), 'Payments API specification updated' (Updated), and 'Staging environment connection checked' (Healthy). A 'NEXT STEP' section titled 'Bring your first API into the workspace' includes an 'Upload specification' button and a progress bar for 'Workspace setup - 1 of 3'.

Import Spec

The screenshot shows the Swagger AI 'Import Spec' dialog box. The dialog is titled 'Add a specification' and has three tabs: 'Upload file', 'Enter URL' (selected), and 'Git repository'. The 'Enter URL' tab contains a 'Specification URL' input field with the text 'https://example.com/openapi.yaml'. Below the input field are 'Cancel' and 'Import specification' buttons. The background shows the 'Specifications' page with a search bar and a list of specifications, including 'Swagger Petstore - OpenAPI 3.0'.
