Langflow:

Without 'chat input':

With 'chat input':

The screenshot shows a chat interface with a dark background. It features three messages: two from a 'User' and one from an 'AI'. The user messages are identical, asking for invoice details. The AI response, marked with a green checkmark, states it is finished in 272 tokens and 1.2 seconds. It then provides a list of seven requested details from a document.

User
Fetch the invoice number, billed to, issue date, quantity, unit price, line total and due amount

User
Fetch the invoice number, billed to, issue date, quantity, unit price, line total and due amount

AI
✓ Finished in 272 | 1.2s

Based on the provided document, here are the requested details:

1. Invoice number: INV-9263
2. Billed to: Shan and Co
3. Issue date: 10/15/2025
4. Quantity: 10,000.00
5. Unit price: 500.00
6. Line total: 5,000,000.00
7. Due amount: \$5,000,000.00

Postman:

The screenshot displays the Postman interface for a POST request to `http://localhost:7860/api/v2/files`. The request body is a form-data containing a file named `invoicefile.pdf`. The response, with a status of 201 Created, is shown in JSON format.

User Story Review Summary

Parameter	Description	Score (out of 20)
Clarity	The story is clear and concise, but lacks detailed acceptance criteria.	16
Completeness	Preconditions not clearly mentioned. Acceptance criteria are somewhat vague.	14
Business Value Alignment	Strong healthcare relevance and compliance focus, aligning with HIPAA and patient safety.	19
Testability	Can be tested through user story workflow automation, but requires more specific test cases.	17
Technical Feasibility	Technically feasible with hospital system integration, but requires EHR system compatibility.	18

Overall Score: 84 / 100

Improvement Areas:

1. Add explicit acceptance criteria for user story workflow automation:
 - Define specific test cases for user story completion.
 - Include system actor details for approval workflow.
2. Specify validation rules for user story requirements:
 - Include dosage and duplicate drug validation rules.
 - Define clear preconditions for user story execution.

The screenshot displays the Langflow interface for a custom agent named 'UserstoryReviewAgent-Customized'. The top bar shows the URL 'http://localhost:7860/api/v1/run/c75f2bd2-010a-4e5a-9894-2e90202a9a7d' and a 'Send' button. Below the URL bar, tabs for 'Docs', 'Params', 'Authorization', 'Headers', 'Body', 'Scripts', and 'Settings' are visible. The 'Body' tab is active, showing a raw JSON request. The response is displayed below, showing a 200 OK status with a response time of 10.95 s and a size of 13.39 KB. The response is a JSON object containing 'sender_name', 'session_id', 'context_id', and 'text'. The 'text' field contains a detailed review of a user story, highlighting areas for improvement and providing specific recommendations.
